

JCalendar new features in JComponentPack 1.1.0

- 1. New property to control the action click count**
- 2. New client property to control the “today” button action behavior**
- 3. JCalendar works with AComboBox and add new calendar popup icon.**

1. New property to control the action click count

JCalendar provides new property named “actionClickCount” since [JComponentPack 1.1.0](#), use this property, you can set the mouse click count to fire the action event, JCalendar adds the following methods:

```
JCalendar.getActionClickCount();  
JCalendar.setActionClickCount(int);
```

2. New client property to control the “today” button action behavior

With this new client property “JCalendar.todayButtonFireActionEventEnabled” since [JComponentPack 1.1.0](#), the JCalendar can fire the action event when the today button clicked.

The above new features is very important when JCalendar working with the AComboBox, the the popup JCalendar make visible, by using the above property, the popup can hidden when use click a “today” button or select a specified day.

3. JCalendar works with AComboBox and add new calendar popup icon.

When AComBoBox set a Date value , the popup icon automatically became a calendar icon, this is a nice feature since [JComponentPack 1.1.0](#), see the screenshot for this feature:
